

QUEENSLAND'S TENEMENT REPORTING REQUIREMENTS

Is all your data in a suitable digital format for submission?

Do you need to convert, standardise or validate your data?

Is your tenement at risk if you don't meet these requirements?

PRIMED - CHECK✓ IS HERE TO HELP

The *Practice Direction for Minerals and Coal Reporting* requires all your **exploration data** (mapping, drilling, sampling, analysis / assay results, geophysical, geochemical or remote sensing) to be in standardised digital formats to submit with annual **Activity** and **Relinquishment / Surrender / Final Reports** for your **Exploration Permits (EP)** or **Mineral Development Licences (MDL)**.

Primed GLOBAL and **GeoCheck** have joined forces with support from **Avantix** to provide a quality cost-effective service to help prepare your data for compliant submission.

At **PRIMED-CHECK** we have the people with the necessary expertise, software and tools to help prepare your resource data to meet the Geological Survey of Queensland's (GSQ) data and reporting requirements for submission via the new **Lodgement Portal**. We can convert your hard copy or analogue data into digital formats then convert it to match fields and dictionaries with the GSQ's submission templates and other required formats.

Contact us today at reports@primed-check.com.au or call David Green on 042 777 1379 for more information.
